

SafeGuard™ Treatment System

An integrated flour and alternative
grain food safety solution

Protect

your brand reputation

From manufacturers to consumers, the pathogen-related risk of eating raw flour in cookie dough or cake batter is commonly misunderstood.

Did you know flour can be at risk for exposure to naturally occurring biological hazards, including *E. coli*, *Salmonella* and *Listeria monocytogenes*? To help eliminate these risks, many flour-based products require additional cooking steps for consumers to perform, frequently instructed on the the packaging. You need to protect your brand with a proactive solution that can help you mitigate the risk of costly recalls.

74% of consumers at least sometimes taste the batter directly from a mixing bowl, spoon or beater¹

53% of consumers sample refrigerated/ frozen cookie dough prior to baking¹

Our solution

To help keep your customers safe from pathogen related food safety risks, **SafeGuard™ Treatment** has a minimum of four-log pathogen reduction process that creates a safe heat treated flour that can be used for ready-to-eat applications. Our heat treatment technology has a decade-long legacy as a successful, commercially sold product line, available for both traditional wheat-based and alternative grain, flour, pulses, seeds and flakes.

Our products with SafeGuard™ Treatment System

Wheat flour

Benefits

- ◆ Integrated supplier solution that can help extend flour safety from our facilities to yours
- ◆ Flour is prepared in a closed system, from heat treatment to processing and delivery (only for bulk flour)

Alternative grains

Benefits

- ◆ We heat treat grains, flour, flakes and blends and help extend flour safety from our facilities to yours
- ◆ May help reduce earthy or nutty taste in certain alternative grains

Our wheat flour process

1

Pristine mills

Wheat is milled into flour in our pristine, BRC-certified facilities.

2

Processing

Flour is milled and stored, then undergoes our proprietary heat treatment. The treated flour goes through a series of precise controls that delivers a validated pathogen reduction.

3

Post-treatment handling

For bulk sizes of traditional wheat-based application flours, the product is then loaded out through dedicated piping and bins designed for cleaning and sanitizing. Our facility uses dedicated filtered air handling for transporting the treated flour through the system.

4

Delivery

Validated flour is delivered directly to your facility through our tightly managed process to maintain ingredient integrity and safety.

Our product line offerings

PRODUCTS	BAG (50 lb.)	BULK (DELIVERY)	PATHOGEN REDUCTION	AVAILABILITY	APPLICATIONS	
 TRADITIONAL WHEAT-BASED FLOUR	◆	◆	Up to five log	<ul style="list-style-type: none"> All-purpose Bread Cake Pastry flours 	<ul style="list-style-type: none"> Whole wheat 	<ul style="list-style-type: none"> Cookie dough Appetizers & cold-pressed bars Other ready-to-eat applications
