

# Farm-focused regenerative solutions

Farmer Tools & Resources

## Farm-focused regenerative solutions

**At Ardent Mills, everything we do begins with a kernel of intent and a desire to make a genuine impact.**

Working with farmers every day, we see how agriculture plays a critical role in impacting climate change. That's why we're investing in the next generation of farmers to help reduce greenhouse gas emissions, and improve the health of our crops, soil and environment. Ardent Mills has partnered with experts in the field that will help us accomplish these goals, and enable us to offer farmers access to a variety of agronomic solutions.

**How does our program work?**

### **Step 1 - Engagement**

Enrolled farmers receive a per acre incentive and access to our team of agronomic consultants.

### **Step 2 - Measurement**

Field level data is collected to establish a baseline measurement and identify opportunities for continued improvement.

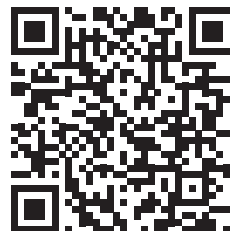

### **Step 3 - Improvement**

Farmers receive solution-based support to assist with their goals of implementing changes where applicable for reducing carbon emissions on the farm, increasing soil nutrient density and improving water conservation.
